PROFILE

A proactive, self-taught, and bilingual Front End Developer with great communication skills. Experience in web design, JavaScript, and React. Dedicated to learning the basics in depth and open to adapting to new technologies and environments. Passionate about analyzing problems and coming up with creative solutions.

PROJECTS

MONEY TRACKER LIVE • CODE

REACT • TAILWIND CSS • FIREBASE

A simple money management application with authentication functionality. The app is designed with Tailwind CSS and provides dark/light mode. Users can sign up with their emails and all the data is stored in the Firestore database.

SPEECH THERAPIST BLOG LIVE • CODE

GATSBY • NODEJS • GRAPH QL

A blog built with Gatsby. The blog contents are easily managed with Markdown documents. All contents' titles are slugified and added to the url. The contents are searchable by categories and tags.

SUSHI RESTAURANT WEBSITE LIVE • CODE

REACT • EMAILJS • GOOGLE MAPS API

A responsive sushi restaurant website provides customers with the menu, hours, and location. A visual map is displayed by using Google Maps API. Customers can submit requests on the 'Contact' page, and the message is sent to the owner's email by EmailJS.

E-COMMERCE SITE LIVE • CODE

REACT • FAKE STORE API

A mock e-commerce site with React and fake store API. React context hook is used to manage the state. A user can (pretend to) login, add products to a cart, and make a payment.

TO-DO LIST LIVE || CODE

REACT • BOOTSTRAP • LOCAL STORAGE

A CRUD To-do List built with React, Bootstrap, and localStorage. A user can add a list, edit it, and delete it. The list is draggable. The progress bar on the bottom shows how many tasks are completed. Data persists in the browser localStorage.
